

How to Care for Your Chambo Woodworks Custom Made Wood Products

****For cutting / charcuterie boards please refer to the appropriate care guide specific to those products**

In order to keep your wood product looking great there are simple steps to be taken. If properly maintained your custom wood product should last a lifetime.

Your wood product has had 2 to 3 coats of finish applied, typically a hardwax-oil such as Osmo Polyx or a water based lacquer finish.

Cleaning / Care

- Use coasters if placing beverages on your products.
- Remove residue with a cloth, paper towel or sponge.
- If additional cleaning is necessary, clean your product with a damp cloth and mild detergent - dry immediately afterwards.
- For additional protection and water resistance apply a paste wax to your wood product. Please follow the manufacturer's instructions.

What **NOT** to do

- Do not allow liquid to sit on your wood product, wipe it up immediately. Wood finishes do provide some water resistance, however liquid can still penetrate if left too long and result in damage or staining.
- Avoid exposure to a high heat source such as a stove-top.
- Do not place a hot frying pan or pot directly on your board.
- Do not use harsh cleaners or abrasives on your wood product.

Most importantly, please enjoy your wood product and contact us directly if you have any questions or concerns.

Thank You!
